

New DRM85-C

FlashMic family expands with new cardioid version

Combining a high-quality Sennheiser capsule with a broadcast-quality Flash recorder, the ground-breaking HHB FlashMic has quickly become established as the portable recording device of choice for international broadcasters. Now HHB has expanded the FlashMic range with the introduction of a new cardioid version – the FlashMic DRM85-C – specifically for more directional recording in environments in which there are high ambient sound levels, such as press scrums and conflict zones.

Both the new DRM85-C and the original, omnidirectional FlashMic DRM85 share the same comprehensive feature set, which includes 1GB Flash memory for over 18 hours recording, USB audio data transfer, a high quality preamplifier with full manual or automatic gain control (AGC), an illuminated LCD display and 9 user templates which can be configured externally using the FlashMic Manager software supplied (Mac/PC).

Rugged build quality, exceptional sound quality, ease of use, fast file transfer and instant, one-button recording further secure the FlashMic's position as the ultimate portable recording device.

New V4 Firmware

FlashMic gains powerful new features

All FlashMics now ship with new FlashMic V4 firmware, which adds the following facilities to an already comprehensive feature set:

- A new flash file system ensuring recordings are retained even if the batteries are removed while in Record
- The facility to introduce cue points during playback, enabling the user to begin compiling the finished piece as soon as the interview is over
- The facility to skip between tracks and markers in playback
- Enhanced meter decay characteristics
- The facility to meter level in both Idle and Play modes (particularly helpful when preparing for an interview).

The FlashMic Manager software is also upgraded to include the facility to transfer MPEG encoded files with either .wav or .mp2 extensions.

Go to www.flashmic.info for all the latest FlashMic news, updates & FAQs, and to download the FlashMic V4 firmware plus FlashMic Manager V4.
